PROFESSIONAL SUMMARY

Backend Software Engineer at Capgemini with hands-on experience building production-grade RESTful APIs using Java and Spring Boot. Proficient in designing secure, scalable microservices with Spring Security, JWT authentication, and PostgreSQL. Strong problem-solving foundation with 500+ DSA problems solved on LeetCode and GeeksForGeeks.

TECHNICAL SKILLS

Languages & Frameworks: Java, SQL, Spring Boot, Spring Cloud, Spring Security, Spring Data JPA (Hibernate), REST APIs, Microservices

Cloud & DevOps: AWS (EC2, S3, Lambda, DynamoDB), Docker, Git / GitHub, CI/CD Basics

Databases: PostgreSQL, MySQL

Tools & Concepts: Postman, Maven, IntelliJ IDEA, OOP, Data Structures & Algorithms, DBMS, System Design

AI-Assisted Development: Claude AI, Cursor — used for accelerating code development, debugging, and learning new concepts across projects.

WORK EXPERIENCE

Software Engineer | Capgemini

Jul 2025 – Present

- Developed and maintained REST APIs in Java and Spring Boot for a digital banking platform, handling modules like account management and transaction processing under guidance of senior developers.
- Performed root cause analysis (RCA) on production and QA-reported bugs in banking APIs, debugging using logs and stack traces, and fixing issues related to data validation, null handling, and incorrect business logic.
- Implemented authentication and access control features using Spring Security (JWT-based) to secure banking API endpoints as per project requirements.
- Collaborated with senior engineers and QA team to reproduce reported bugs, identify root cause, and implement fixes within sprint deadlines, ensuring minimal disruption to banking workflows.

PROJECTS

Splitcase — Expense Sharing Platform — Java · Spring Boot · Spring Security · JWT · JPA/Hibernate · MySQL

github.com/prateektiwari31/Splitcase

- Built a Splitwise-style expense-sharing REST API on PostgreSQL, supporting group expenses with EQUAL, EXACT, and PERCENTAGE split types.
- Implemented stateless JWT authentication with a custom JwtAuthFilter and BCrypt password hashing via Spring Security.
- Designed normalized JPA entities (User, ExpenseGroup, Expense, ExpenseSplit) with ManyToMany and cascading OneToMany relationships.
- Built a greedy debt-simplification algorithm and exposed it through dedicated balance and settle-up REST endpoints to minimize the number of transactions needed to settle group balances.
- Added asynchronous email notifications (Spring @Async, dedicated ThreadPoolTaskExecutor) for new expenses and settlements without blocking API responses, with per-recipient failure isolation.
- Added centralized exception handling and request validation via a global @RestControllerAdvice, and documented all endpoints with springdoc-OpenAPI/Swagger UI (JWT bearer security scheme).

Movie Booking System — Java · Spring Boot · Spring Security · JWT · PostgreSQL · JPA/Hibernate

github.com/prateektiwari31/movieBooking

- Built a production-grade movie ticket booking API with role-based access control (ADMIN / USER) across 26 REST endpoints spanning movies, theaters, shows, and bookings.
- Implemented stateless JWT authentication with a custom JwtAuthenticationFilter and BCrypt password hashing, backed by a CustomUserDetailsService and DaoAuthenticationProvider.
- Designed relational JPA entities (Movie, Theater, Show, Booking, User) with ManyToOne/OneToMany mappings and seat-level validation to block double-booking of the same seat on a show.
- Modelled the booking lifecycle as PENDING → CONFIRMED / CANCELLED, enforcing theater-capacity checks on booking and a 2-hour pre-showtime cutoff for cancellations.

Microservices Quiz Application — Java · Spring Boot · Spring Cloud · Netflix Eureka · OpenFeign

github.com/prateektiwari31/Quiz-App

- Architected a microservices-based quiz platform with independently deployable Question Service and Quiz Service, registered with a Eureka discovery server for dynamic service registration and lookup.
- Implemented inter-service communication using Spring Cloud OpenFeign declarative REST clients, letting the Quiz Service fetch questions, retrieve answer options, and compute scores from the Question Service without hardcoded URLs.
- Designed the quiz lifecycle end-to-end: category-based quiz creation, question-set retrieval by ID, and answer submission with automated scoring against stored correct answers.

EDUCATION

GL Bajaj Institute of Technology & Management — MCA (Master of Computer Applications) | 8.49 CGPA 2025

Dr. Ram Manohar Lohia Avadh University, Ayodhya — BCA (Bachelor of Computer Applications) | 7.43 CGPA 2023

ACHIEVEMENTS & CERTIFICATIONS

- Solved 500+ DSA problems on LeetCode and GeeksForGeeks — consistently ranked in the top percentile for problem-solving.
- AWS Cloud Practitioner Course Completion Certificate (Udemy) — covering EC2, S3, Lambda, and DynamoDB fundamentals.
- MCA graduate with 8.49 CGPA — strong academic record across the full computer science curriculum.
